Ahmedabad, Gujarat, India | +91 91060 20049 | dhruvharani5@gmail.com | dhruvharani.dev | github.com/DhruvHarani1 | linkedin.com/in/dhruv-harani

EDUCATION

LJ University — B.Tech, Computer Engineering

Expected 2028

CGPA: 8.5+/10 | Relevant Coursework: Signals & Systems, Data Structures & Algorithms

EXPERIENCE

Software Developer Intern — FloIndex Ventures LLP, Ahmedabad, Gujarat

Jan 2026 – Present

clarityy.ai

- Architected and built **Clarityy AI**, a live portfolio analytics platform with active users, owning the majority of engineering across a React/Vite frontend and FastAPI backend
- Built an automatic broker-tradebook detection and parsing pipeline that computes Weighted-Average-Cost (WAC) based P&L for Indian retail investors, benchmarked against the Nifty 50 index
- Implemented Google OAuth via Supabase and a continuous feedback pipeline (Google Apps Script → Google Sheets) to drive product iteration from real user data
- Deployed and maintained production infrastructure across Netlify (frontend) and Render (backend)

PROJECTS

HMS — Hostel Management System

[GitHub](#) | [Live \(web\)](#) | [Android app](#)

- Designed and built a full-stack system (NestJS + Prisma + PostgreSQL backend, React Native/Expo mobile app) to digitize meal attendance, complaints, and notices for a college hostel
- In daily active production use by 50 students, 1 warden, and 2 kitchen staff

Nexus — Financial Analytics Platform

[Live](#)

- Built a Next.js/TypeScript platform aggregating Yahoo Finance and Financial Modeling Prep data for US and Indian (NSE) equities
- Audited and fixed multi-stage Free Cash Flow and ROIC calculation bugs — invested capital formula, tax rate sourcing, and CapEx sign convention — and migrated off a deprecated Yahoo Finance API to fundamentalsTimeSeries

Cross Recommendation System — Cross-Domain Content Recommender (Team of 3)

[GitHub](#)

- Built a semantic recommendation engine (FastAPI + PostgreSQL) mapping movies, books, songs, and games into 384-dim embeddings (Sentence Transformers) and ranking results via vectorized cosine similarity blended with a popularity score
- Designed a 4-stage search pipeline (exact → fuzzy → external API fallback → semantic) and a diversity-balancing algorithm across content types; built the React/Vite frontend and Google OAuth/JWT authentication

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML, CSS

Frontend: React, Tailwind CSS, HTML5, CSS3, Responsive UI Design

Backend: Core Java, JDBC, PostgreSQL, REST APIs, Backend Logic & Architecture

Databases: PostgreSQL, Supabase

AI/ML: AI Model Integration, Prompt Engineering, API-driven App Development

Tools: Git, GitHub, Netlify, VS Code, IntelliJ IDEA

Concepts: Data Structures & Algorithms, OOP, DBMS, Software Engineering, Agile

ACHIEVEMENTS & ACTIVITIES

- Presented TextIt as leading developer at a hackathon hosted by Royal Technologies (1st year)
- GitHub Achievements: Pull Shark (x2), YOLO, Quickdraw — reflecting consistent open-source contributions and code velocity
- Self-directed learner: independently built and deployed two full-stack projects while in first year of engineering
